Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/870,793

Applicant(s)

KUBO ET AL.

Examiner

Nathan Curs

Art Unit

2633

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 June 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-8 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-8 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 01 June 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Ishakawa et al. (US Patent No. 5909297).

Regarding claim 1, Ishakawa et al. disclose an optical transmission system comprising: an optical fiber transmission line disposed between a transmitter for transmitting a signal of a predetermined wavelength and a receiver for receiving the signal, through which the signal propagates from the transmitter toward the receiver (fig. 29-35 and col. 20, lines 34-63); a dispersion compensating system for compensating for chromatic dispersion in said optical fiber transmission line (fig. 35 and col. 20, lines 61-63); a measuring system for monitoring variation in temperature of said optical fiber transmission line or variation of chromatic dispersion in said optical fiber transmission line (col. 20, lines 1-33); and a control system for controlling a dispersion compensation amount of said dispersion compensator, based on the result of measurement by said measuring system (col. 20, lines 44-63).

Regarding claim 2, Ishakawa et al. disclose an optical transmission system according to claim 1, wherein said measuring system includes a temperature sensor for detecting the temperature of said optical fiber transmission line (col. 20, lines 11-26).

Regarding claim 3, Ishakawa et al. disclose an optical transmission line according to claim 1, wherein said measuring system includes a dummy fiber transmission line disposed

along said optical fiber transmission line, a light source for emitting monitor light of a predetermined wavelength into the dummy fiber transmission line, and a photodetector for receiving the monitor light having propagated through the dummy fiber transmission line (col. 20, lines 11-26), and wherein said control system calculates a variation amount of chromatic dispersion in said optical fiber transmission line, based on the result of detection of light quantity by the photodetector (col. 20, lines 27-33).

Regarding claim 4, Ishakawa et al. disclose an optical transmission system according to claim 2, wherein said temperature sensor includes an optical fiber temperature sensor disposed along said optical fiber transmission line (col. 20, lines 11-26).

Regarding claim 5, Ishakawa et al. disclose an optical transmission system according to claim 1, wherein said dispersion compensating system shifts the wavelength of the signal from said transmitter to the longer wavelength side or to the shorter wavelength side, thereby compensating for the variation of chromatic dispersion due to variation in temperature of said optical fiber transmission line (col. 17, line 62-10 and col. 20, lines 11-30).

Regarding claim 6, Ishakawa et al. disclose an optical transmission system according to claim 1, wherein said dispersion compensating system includes a dispersion compensator disposed on a signal light path from said transmitter to said receiver (col. 20, lines 44-63), and wherein said control system controls the dispersion compensation amount of said dispersion compensator according to a variation amount of chromatic dispersion in said optical fiber transmission line (col. 20, lines 27-33).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2633

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ishakawa et al. (US Patent No. 5909297) in view of Danziger et al. (US Published Patent Application No. 09/860647).

Regarding claim 7, Ishakawa et al. disclose an optical transmission system according to claim 6, but do not disclose that said dispersion compensator includes a dispersion compensating optical fiber. Danziger et al. disclose a controllable dispersion compensator including dispersion compensating optical fiber (abstract and paragraphs 0010-0015). It would have been obvious to one of ordinary skill in the art at the time of the invention to use the DCF-based variable dispersion compensator of Danziger et al., in the system of Ishakawa et al., in order to control the amount of dispersion compensation in the system.

5. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ishakawa et al. (US Patent No. 5909297) in view of Eggleton et al. "Electrically tunable power efficient dispersion compensating fiber Bragg grating"; Eggleton et al., Photonics Technology Letters, IEEE, Vol: 11, Issue: 7, July 1999, Pages: 854-856).

Regarding claim 8, Ishakawa et al. disclose an optical transmission system according to claim 6, but do not disclose that said dispersion compensator includes an optical fiber grating. Eggleton et al. disclose a tunable dispersion compensator including an optical fiber grating (abstract, and page 856, Conclusion paragraph). It would have been obvious to one of ordinary skill in the art at the time of the invention to control the amount of dispersion compensation in

Art Unit: 2633

the system of Ishakawa et al., using the grating-based tunable dispersion compensator because of its power efficiency and small size, as taught by Eggleton et al.

Conclusion

6. Any inquiry concerning this communication from the examiner should be directed to N. Curs whose telephone number is (703) 305-0370. The examiner can normally be reached M-F (from 9 AM to 5 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Chan, can be reached at (703) 305-4729. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-4700.

JASON CHAN
